Feedback Control of Dynamic Systems, 1994, Gene F. Franklin, J. David Powell, Abbas Emami-Naeini, Addison-Wesley Longman, Incorporated, 1994

A textbook that develops insights into the problems of control and intuition about methods available to solve them, emphasizes design in parallel with analysis techniques, shows the unity among the several individual design techniques and synthesizes them into a "toolbox" of problem-solving methods, and presents this interdisciplinary material in a way that is easily understood by students from any engineering background. In addition to pedagogical enhancements, this edition adds computer commands for many operations and makes available a MATLAB toolbox with files that will reproduce many of the figures of the text.
